

Introduction:

This journal is published by Artem Potebnia and presents his scholarly research articles, thematic presentations, and software applications covering a broad range of topics in contemporary graph theory, from purely theoretical fundamental findings to all applications of graph-related studies in general computer science. Its content is available for readers under the open access principle. The primary emphasis of the journal publications lies on the investigation of hypergraphs, complex networks, algorithms, combinatorial optimization problems, and questions in computational complexity. The pages of the journal could be considered as an excellent source of useful and actual materials by both academic researchers and industry professionals.

Contents of the Journal:

Section: Original Scientific Articles in Graph Theory

Method for classification of the computational problems on the basis of the multifractal division of the complexity classes

View as PDF

Representation of the greedy algorithms applicability for solving the combinatorial optimization problems based on the hypergraph mathematical structure

View as PDF

Formation of the multifractal hypergraph structure reflecting the self-similarity properties of the computational complexity classes

View as PDF

Innovative concept of the strict line hypergraph as the basis for specifying the duality relation between the vertex separators and cuts

View as PDF

Creation of the mathematical apparatus for establishing the duality relation between the vertex separators and cuts in hypergraphs

View as PDF

Construction of the comprehensive multi-layer graph model of the search spaces associated with the combinatorial optimization problems

View as PDF

Algebra for transforming the structure of the search spaces associated with the combinatorial optimization problems

View as PDF

Innovative metrics for assessing the catastrophic collapse of the complex networks under the greedy attacks on their most important vertices and edges

View as PDF

Method of graph mining based on the topological anomaly matrix and its application for discovering the structural peculiarities of complex networks

View as PDF

Comprehensive method for discovering and assessing the rich-club organization in multihypergraphs

View as PDF

New method for estimating the tree-likeness of graphs and its application for tracing the robustness of complex networks

View as PDF

Устойчивость сложных систем к структурным атакам на основе формирования вершинных сечений [Resistance of complex systems to structural attacks based on the formation of vertex cuts]

View as PDF
